Subject Index

VOLUME 23, 2002

Acceptable stuttering, 184, 202
Acute Confusion State (ACS), 92–93
  global deficiency, 96
Allophone, 59
Alzheimer's Disease (AD), 95, 101, 139–147. *See also* Attention; Neglect
  alertness, 140–141
  attention, 141–144
  functional implications and daily tasks, 147
  Lewy Bodies Disease, 145–146
  neurological and neurochemical changes, 146
Aphasia, 101
  assessment and treatment, 110–113
  attention impairment, 108–109
  dual task interference, 109
  neglect, 109
  vigilance and arousal deficits, 108
Apraxia of speech, acquired, 251–252
  articulation, 257, 261
  lexical retrieval, 257
  motor planning and programming, 259, 269
Apraxia of Speech (AOS), 223, 233, 263, 293
  acquired, 257–258
  assessment, 226
    acoustic measures, 283–285
    articular movement, 286
    behavioral checklists and perception tests, 283–284
    intelligibility tests, 282
    physiological measures, 285, 286
    profile, 281, 287
  concomitant disorders, 234, 260
  definition of, 267
    behavioral, 267, 268
    brain mapping, 271
    cognitive, 269
    neuroanatomic, 268
  dysprosody, 251–252
  frontal (Broca's) network, 228
  interactive activation model, 237
  Lichtheim Phenomenon, 235
  models of motor speech production, 225–226, 270
  neurological basis, 224
    left hemisphere parietal frontal circuits, 226–228, 271
    premotor coding and motor control, 228
  neurological correlates, 225, 228
    speech motor control, 223–224
  neurophysiological models, 232
    dysarthria, 232–233
  parietal frontal circuits, 228
  phonetic buffer, 233, 235, 239
  phonological awareness, 235–236
  treatment
    planning, 287–289
    programs, 295–302, 319–320
    target selection, 318–320
    targets, 310–317, 320–321
Apraxia of speech, developmental, 257
  babbling, 259–262
  concomitant dysarthria and motor dyspraxia, 260
  diagnostic markers in children, 262
  genetic component, 264–265
  hearing impairment, 259–260
  mapping, systemic and phoneme-specific, 260–263
  Nuffield Dyspraxia Program, 265
  speech motor learning, 260–262
Apraxia of speech, diagnosis
  syndrome-based, inclusion criteria, 272, 275
  treatment-driven, 286, 287
Apraxia of speech, differentiation
  dysarthrias, 275
  phonological errors, 273–274
Articulation vs. Metaphonological Therapy, 34–35. *See also* Metaphon Program
Ascending Reticular Activating System (ARAS), 90, 92
Attention, 89–90, 97
  Alzheimer's disease, early stages, 145
  arousal, 90
  divided, 103–104, 109
  dysfunction syndromes, 89, 99–100
  matrix, 92
  neural networks, 92, 96

Attention *(continued)*
selective, 91, 101–103
global deficiency, 96
spatial, 93–96, 100, 119
Attention Deficit Disorder with Hyperactivity (ADHD), 92, 104
Attention deficit impairment, brain injury and stroke, 107, 117–119, 129
Attention impairment, 130–131
assessment, 131–133
information processing, 134
treatment strategies and protocols, 133, 135–137
Attention Process Training (APT), 113, 134–135
Attention Training Program (ATP), 112–113

Balloons Test, 122
Behavioral Inattention Test (BIT), 120
Blindness, inattention and change, 104
Block and Arrow Models (historical), 231
Bullying in stuttering, 205–206

Child/S-LP interaction, 32, 37
Childhood stuttering *See* Stuttering in children
Chronic confusion state, 93
Clinical treatment models, 57
Consistency index, 75–76
Conventional vs. Variant treatment models, 62–65
Derailment of motor control
in apraxia of speech, 225–226
auditory targets, 228
Diffuse attention system, 91–92, 96
Discourse structure, 71
Dynamic Systems Model, 21–22
Dysarthria and muscle weakness, 19, 22

Electropalatography, 35–36
Elicited production procedure, 71–72
Error pattern identification, 4–5

Functional Independence Measure (FIM), 121
Functional neuroimaging, 90, 92, 96

Global Attention Dysfunction, 92

Individualized Education Plan (IEP), 159, 160, 163
collaborative training tools, 178–179
goals and benchmarks, 161–162, 173–174, 178
transition plans, 162
Individuals with Disability Education Act 1977 (IDEA '97), 155, 159, 165–166, 170
communication, academic and social, 198
parent involvement in treatment, 162–163
standardized diagnostic assessment, 168

Language Acquisition Preschool (LAP), 74
Language-based intervention in phonological disorders, 70, 77–79
morphosyntax, 71–79
narrative-focused treatment, 70, 72
syntax vs. articulation, 72
top-down processing model, 70
Lexical concept (lemma), 258
Limb apraxia and limb control, 226–227, 270
Linguistic planning, 246, 247

Major class feature, 59
Maximum and minimum contrast, 59
Meta-interaction in therapy, 37
Metaphon program (Metaphonology), 28, 32–33
Minimal pair, 58, 60–61
Mirror neurons, 227–228, 251, 253
MMC (Meaningful Minimal Contrast) Therapy, 32–33, 37
Multimodal word processing models
Logogen model, 233, 235
postlexical dysfunction, 234
metaphonological tasks, 235–236
Levelt model, phonological encoding, 236, 257

National Stuttering Association, 163, 201, 214
Natural phonological processes, 44
Naturalistic techniques, 70
focused stimulation and scaffolding narratives, 71–72
intervention, 73–74
phonemic inventory, 74
NDP (Nuffield Dyspraxia Program), 34
Neglect, 94–96
in Alzheimer's Disease, 142–143
hemisphere severity, right vs. left, 109, 117
right hemisphere damage, 125
spatial, 118–119
unilateral hemisphere, 117, 119, 125
Neuroimaging, 246, 253
Neuronal pools, 227, 246
Non-major class distinction, 59, 61
Nonlinear phonology, 44, 45–47
consonant harmony in children, 47
nonlinear grammar, relationship to, 44
syllable structure, 46–48

Oral-motor exercises, 15–16, 22
non-speech activities, 20–22
speech remediation, 17

PAD (Phonological/Articulatory Disorders), 16–23

Part-Task Training, 18, 22
Pattern-Based Treatment, 7
Pharmacotherapy, 113–114
Phonemic inventory, 60–61. *See also* Naturalistic techniques
Phonetic vs. lexical repair, 38
Phonological assessment
  decision making, 8–9
  homonymy, 61
  phoneme, 58
  phonetic inventory, 60–61
Phonological awareness
  intervention, 33–35, 38–39
  literacy skills, development and improvement, 28, 32, 34
  speech process, 29–30
Phonological delay, 49
Phonological disorders
  clinical implications, 48–49
  treatment strategies, 44, 49–54
Phonological process, classification and quantification, 6–7
Phonological treatment, 4, 7–8
  treatment continuum, 33–35
  treatment types, 33
Phonotactic patterns and word stress, 47–48
PROMPT, 294–321
Prosodic abnormalities, 268, 284
Prosodic analysis, 253
Prosody, 245–246
  extrinsic, right hemisphere, 249–250
  intrinsic, 248–249
    left hemisphere dyspraxia, 251
Psycholinguistic approach, therapy task analysis, 35, 39. *See also* Miltimodal Word Processing Model
Psycholinguistic models, 268, 270

Speaking, writing, and understanding, 234–235
Specific Language Impairment (SLI), 70, 74
Speech Foundation of America (SFA) (now Stuttering Foundation of America), 214
Speech-Language Pathologist's role in stuttering therapy, 205–210
  active listening, 206
  role-playing, 207
Speech modification, 196
  challenges, 183–184
  treatment types, 181–183
Speech motor control, 234–240
Speech motor programming
  Generalized Motor Program (GMP), 239
  reaction time, 238–239
Speech production
  articular muscle strength, 19–20, 22
  muscle coordination and kinematics, 21–22, 23
  sensory-motor function and lingual sensitivity, 20
Speech Progression System, 28, 29
Speech sound meta-language, 32
Stuttering
  disfluency, 190–192, 195
    reduction, 193, 196–199
  group therapy, 191–192
  support groups, 214
    benefits, 213, 215–216
    obstacles, 217
  therapy success indicators, 193, 196
Stuttering Foundation of America, 163
Stuttering in children, 153–157
  chronic, 156
  concomitant disorders, 155–156, 167
  evaluation of communication ability, 166–167
    integrative evaluation and treatment, 170, 183, 196
    multidimensional, 160, 165, 195
    speech samples, 168
  fluency characteristics, 167, 197–198
  social behavior, 169–170
  treatment protocols, 169
  variability, 156, 163, 165
    therapy frequency and location, 162
Stuttering intervention models
  assertiveness, 207
  desensitization, 206, 208–209
  self-esteem, 209–210
Stuttering modification, 187, 196, 202
  environmental influences, 201–202
  implementation, 191
  parent teacher involvement, 192–193
  pragmatic skills, 201
  school-aged client, 187–188
  treatment goals, 188
Stuttering therapy
  behavioral modification, 183
  collaborative treatment, 176–177
  fluency, timing and tension, 199–200
  planning, 174, 179
  prolonged speech and utterance length, 182–183
  techniques
    cancellation, 190–191
    desensitization, 189, 191–192, 200
    identification, 189
    modification, 190
    pull-outs, 190–191
    stabilization, 190–191
  treatment goals, 174–176

Sustained attention *See* Vigilance
Syllable, 247–320

Target selection in treatment, 4, 7–8
Toxic metabolic encephalophy, 93
Training transfer, 17–18, 22
Traumatic Brain Injury (TBI), 129

Verbal and Nonverbal Cancellation Test, 121–122
Vigilance, 103
  sustained attention, 140–141
Visual Neglect
  anatomical basis, 119
  assessment types, 120–123
  treatment modalities, 123–125
  unilateral left hemisphere, 117, 120–121
Voice Onset Times (VOTs), 248

Whole Task Training, 17–18
Whole to Part Learning, 70, 71
Word form (lexeme), 258
